

MegaBlimp Assembly Tips

GONDOLA ATTACHMENT

Figure 1:
Gondola Tape Placement

It's very important to center the gondola squarely over the area marked "Center Gondola Here" on the blimp. Make sure the front of the gondola (end with pilot house window) is facing toward the wider end of the blimp. Peel

back the protective covering on the double sided tape which is already mounted on the gondola, and CAREFULLY place it over the marker and press on to ensure a good stick. For further attachment insurance, it's a good idea to follow up with four pieces of Scotch® transparent tape, two long ones for the sides of the gondola, and two shorter ones for the front and rear (Figure 1.)

FIN PLACEMENT

The MegaBlimp comes with four (4) plastic tail fins. Peel the protective covering from the double sided tape on the fin and place it on the rear of the blimp (the thinner end) directly over the four spots marked "Center Fin Here". Make sure the fin tabs are bent at a 90-degree or right angle. For further attachment insurance, follow up with Scotch® transparent tape along the fin tabs (Figure 2.) Note: Make sure the

Fin Tape Placement

wider end of the fin is closer to the thin end of the blimp.

NOTE: This is NOT meant to replace your instruction manual. Please read the entire instruction manual before operating your MegaBlimp.
